

KEYVAN SILVERIO MONTEIRO

+ EDUCATION

2017 - 2021

COMPUTER ENGINEERING | São Paulo

São Judas Tadeu University (USJT)

Computer engineering is the branch of engineering that deals with the design and construction of computers and systems that integrate hardware and software, enabling the production of new machines and computer equipment to be used in various sectors.

2015 - 2015

GRAPHIC DESIGN | São Paulo

Carlos Drummond de Andrade University

Graphic Design is the area of computing intended for the generation of images in general in the form of data and information representation, or in the form of recreation of the real world, for the digital.

★ GOALS

DevOps & SRE Specialist | Cloud Specialist | System Engineer Specialist

... RESUME

I am passionate about what I do, hardworking and dedicated to the tasks I perform. I work in the IT area since 2009, specialist in Infrastructure and Linux/Unix systems.

I'm always looking for continuous professional development, this makes me seek new knowledge, training and review of what I've learned over time, to increasingly improve my technical and personal skills. My behavioral temperament result in the DISC tool is = CD. My main skills are in: Administration of Servers/Applications on Linux/Unix platform, development of automated routines, troubleshooting to identify system degradation and search for new solutions to complement the current platform.

I'm not afraid of new challenges, I see it as "getting out of the comfort zone", and professional/personal maturation is actually the ideal fuel to motivate me and keep doing what I've always done.

I'm always available to help out-of-work co-workers, my biggest experiences in crises occurred at dawn and on weekends.

Finally, I am a very quiet person, with a lovely family, father of little Mariana, and a big dreamer.

EXPERIENCE

2022/04

At the moment

INTER | São Paulo

SRE Specialist

Responsible for managing cloud infrastructure on AWS, Gateways, Kubernetes and microservices integration. - Conduct migration projects for Kubernetes clusters, update components and control plan. Implementation and configuration of service mesh using ISTIO. - Automate infrastructure and microservices environment, using IAC, focusing on availability and resilience, technologies and languages used: Python, Bash, Ansible, Go, Git. Provide integration with the GitLab environment and delivery mats (CI/CD). - Provide courses and training to transfer and level the knowledge of the internal team.

2020/08

2022/04

MANDIC | São Paulo

DevOps Specialist

At Inter Bank my tasks were: Configuration and deployment of Cloud resources (AWS) through IaC using Terraform and Ansible Configuration and deployment of CI/CD mat using GitLab and Azure DevOps N3 support to the production environment, with products such as: EKS, ECS, S3, EC2 etc. Squad Tech Lead composed of three other DevOps.

2019/08

2020/08

YAMAHA | Guarulhos

Cloud Specialist

Cloud infrastructure management (AWS, Azure, OCI and GCP) development of pipelines and CI/CD jobs, automation of manual routines and script development, systems architecture for agile infrastructure, n3 support to the infrastructure team and SER support of the e-commerce Blu Store.

2019/05

2019/08

BTG PACTUAL | São Paulo

Senior DevOps Engineer

DevOps treadmill deployment and script automation, IaC and administration of the Cloud environment (AWS, Azure and IBM) Support n3 in eventual failures in the platform, development of routines and procedures for the n2 team, continuous improvement in the management of the Web platform seeking new solutions in the market, assistance to the Development team for troubleshooting, server tuning, environment orchestration with Docker containers.
